

High quality food ingredients

Woods Foods is committed to delivering high quality food ingredients for the food manufacturing sector. We provide a range of natural products that are gluten-free, allergy free and offer a healthy alternative or supplement existing products. Most importantly, the products are sustainable, both environmentally and economically, creating a healthy balance for life and land.

Woods Foods was formed in 2012. The company is part of the Woods Group of companies, based in Goondiwindi, approximately 350 km south-west of Brisbane. Woods Group is an Australian, family owned, agribusiness that is committed to delivering value-added outcomes for customers by providing a comprehensive range of products and services.

With the increasing sophistication of consumer demands and increased health awareness, Woods Foods is committed to satisfying this demand by releasing a range of gluten-free pulses (chickpea, faba bean) and grain (sorghum) based food products for use in the food manufacturing industry.

For Australian companies, this will provide the unique opportunity to develop new and exciting products with the knowledge that they are purchasing inputs that are produced in Australia by a 100% Australian, family owned and operated business.

Obesity and the environment are leading issues in today's complex world, and pulses can have a very positive influence on both through their nutritional and biological components. Not only are they high in protein, carbohydrates and dietary fibre for the human body, but they also create their own nutrition when growing, thereby not requiring the additional application of fertilizer.

They are also grown under "dry-land" conditions, utilising the water stored in the soil rather than consuming the scarce water resources from our dams and rivers. The health benefits combined with the positive environmental outcomes make pulses a very unique product.

Sorghum, a renowned ancient grain, is another Australian grown grain that has the potential to offer a range of health benefits to food manufacturers and consumers alike. High in natural antioxidants and protein, and low in fat, it is a gluten-free and allergen-free grain. Similar to legumes, sorghum is predominantly grown under "dry-land" conditions, and plays a crucial role in maintaining farmer's economic viability by providing a sustainable, cost-effective, non-GMO alternative summer crop to corn and cotton. With applications for sorghum possible across a vast range of food products, it makes the utilisation of the grain an exciting alternative.

Woods Foods is SQF Level 3 Certified and adopts good manufacturing practises throughout its entire operation. By being based in Goondiwindi, the heart of Australia's premium pulse and grain growing region, Woods Foods have consistent supply of high quality, environmentally friendly products.
